ORIGAMI DIAGRAMS

Cat Face

The origami cat face is a kitten's head with two pointed ears and a blunt chin, folded from one square and finished with drawn eyes and whiskers. It is a very easy model with five folds and takes about three minutes, so it suits young children and first-time folders.

DIFFICULTY
Easy

TIME
About 3 min

STEPS
5

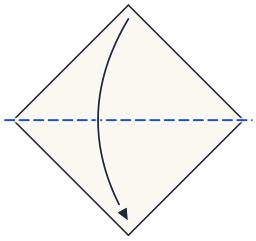

PAPER
A 15 cm (6 in) square in grey, black, orange or white

- Valley fold (toward you)
- Mountain fold (away)
- Existing crease

Cat Face - origami diagram

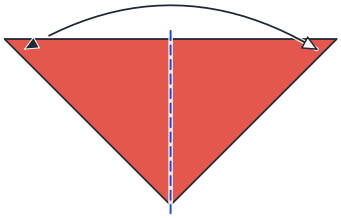

Easy - 5 steps - 3 min

1

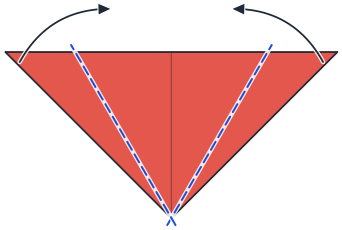

Lay the square as a diamond with the white side facing up, then bring the top corner down to meet the bottom corner, making a triangle.

2

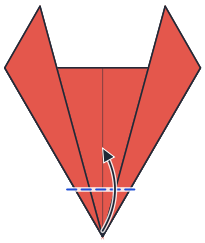

Bring the two side corners of the triangle together to crease a vertical line through the middle, then open it out again.

3

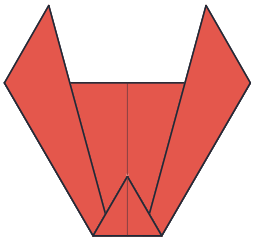

Fold each side corner upward along a slanted line that runs from the bottom point to the top edge, so the tips poke up above the top edge as two pointed ears.

4

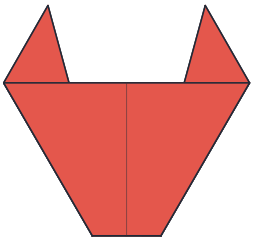

Fold the very bottom point up a short way through all the layers to give the cat a flat chin.

5

Flip the model over to see the finished face with smooth, uncluttered cheeks.

Done

Draw two eyes, a small triangular nose and a few whiskers on the face, and your cat is ready. It makes a quick bookmark decoration, a finger puppet or a card topper.
