ORIGAMI DIAGRAMS

Christmas Tree

The origami Christmas tree is a flat fir tree with three stepped tiers and a small trunk, folded from one square without cutting. It is an easy model that takes about five minutes; the only new idea is a simple pleat that creates each tier.

DIFFICULTY
Easy

TIME
About 5 min

STEPS
7

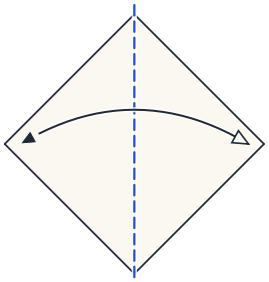

PAPER
A 15 cm (6 in) square, green on one side and white

- Valley fold (toward you)
- Mountain fold (away)
- Existing crease

Christmas Tree - origami diagram

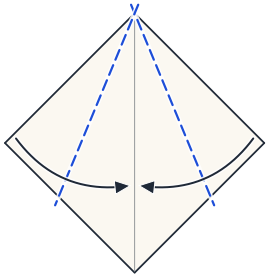

Easy - 7 steps - 5 min

1

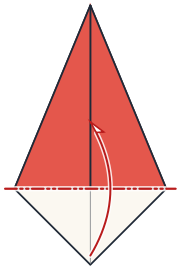

Turn the square so it sits like a diamond with the white side facing you. Fold it in half from the left corner to the right corner, then open it to leave a vertical crease.

2

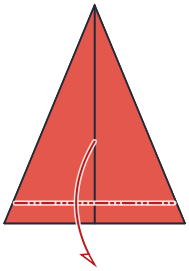

Fold the two upper edges in so they lie along the center crease. The green flaps meet in the middle and form a tall kite with its point at the top.

3

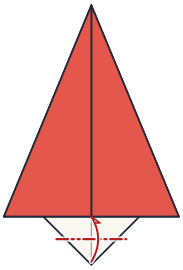

Fold the white triangle at the bottom up behind the model, folding along the line that joins the kite's two side corners. The front is now a green triangle.

4

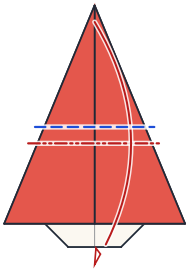

Reach behind and fold the point of that hidden triangle back down, so a white point sticks out below the bottom edge of the tree. This is the trunk.

5

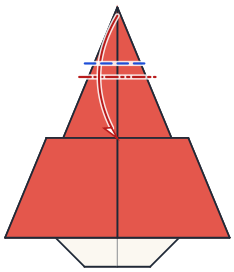

Fold the very tip of the trunk up behind the model, so the trunk has a flat bottom.

6

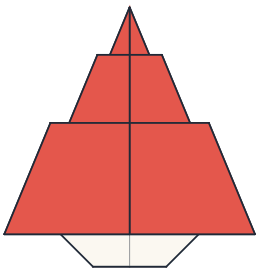

Make the first tier with a pleat: mountain fold the upper part of the tree behind along a horizontal line, then valley fold it back up along a line slightly higher. The top of the tree slides down and a small step appears on each side.

7

Make a second, smaller pleat nearer the top in the same way. You now have three tiers stacked above the trunk.

Done

Your Christmas tree is finished. Glue a small star on the top, dot on baubles with a gold or silver pen, and use it on a card, a gift tag or a garland.
